Net Zero GB Energy Solar

Barker

Partnerships programme

We are one of 200 schools and colleges chosen to participate in a Government-led initiative, the GB Energy Solar Partnerships programme (GBESP).

GBESP is a mission to support schools and colleges in meeting the net zero challenge and help the next generation to lead the way in climate change action.

A team of net zero experts have and will continue to visit the school to examine everything from the condition of the windows and roof, to our heating and lighting settings. They will also look at ways that we can reduce waste across electricity, waste and food including staff and pupil behavioural changes.

GBESP will help us minimise our energy consumption, reduce our carbon emissions and hopefully save money. Some initiatives may be funded as part of the scheme e.g. led lighting, solar panels and battery storage projects.
